BOSCH
Invented for life

- ▶ Programmable input point functions
- ▶ Easy to read switch addressing
- ▶ 2 interconnect wiring connectors
- ▶ Provides eight points

The B208 Octo-input Module is an 8 point expansion device that connects to the control panel through the SDI2 bus. This module is fully supervised and communicates back to the control panel all point status changes. The module expansion points operate the same as the points on the control panel. Industrial, commercial, and institutional facilities are typical installations for the B208 module. The B208 connects to the SDI2 bus on the control panel using SDI2 terminals, or using the interconnect cable. You can connect multiple B208 modules to a single control panel. The B208 address switches allow for ease of use in device addressing.

System overview

The B208 Octo-input Module connects to a control panel through the SDI2 bus. This module is supervised and communicates back to the control panel all point status changes. The module's expansion points operate the same as the points on the control panel.

Functions

Loop inputs

The B208 uses up to eight inputs which may be Normally Open (NO), or Normally Closed (NC) with 1k Ω EOL resistor(s) for supervision.

Installation/configuration notes

Wiring considerations

The module to the control panel using the PWR, A, B, COM terminals on the control panel using the screw terminal strip or the interconnect wiring connector. Use 12 AWG to 22 AWG (1.5 mm to 0.6 mm) wires from the module to the control panel.

Compatibility

For UL 864 compliance, use a UL commercial fire approved control panel.
